Toyota HiAce

Frontline and HiAce
an Australian tradition

Wider body, wider choices, the ultimate HiAce campervan

Frontline has once again transformed the ever-popular HiAce into a comfortable and functional Campervan. The drivability and good old Toyota reliability will make this Campervan a popular choice for years to come.

The bonneted body style of the H30 HiAce places the engine forward of the driving cabin, which most importantly provides increased front end collision protection. Being seated behind the engine bay, means the vehicles are fitted with comfortable twin bucket seats that provide a comfortable ride, plus a walk-through cabin for increased functionality. With further improvements to safety, the H30 HiAce includes seven airbags, Active Cruise Control, Emergency Driving Stop System and holds a 5-star ANCAP rating.

Cabin entry is also made easy via a low large step and grab handles as standard. Another bonus of the current model HiAce is a generous increase to internal width, and clever design has been applied by Frontline to maximize space, creating a very spacious feel to the camper.

The smooth and stable ride of the wide body model HiAce, offers an effortless car-like driving

experience. The 2.8 litre turbo Diesel engine produces 130kW and 450Nm of torque, via a automatic transmission.

The Frontline full elevation pop-top roof system offers superior ventilation and standing room throughout the full length of the Camper. A kitchen area with a fridge/ freezer, sink, twin electric element or optional gas cooktop and storage drawers is provided to whip up those essential meals on the go.

Moving down the vehicle, are various storage compartments for food and clothes. Commonly a large boot is accessed by the tail gate and then inconspicuous while closed.

The standard auxiliary battery system is controlled via the master control panel, which will run the Campervan fridge, lights, water pump and fan. There's also multiple 12v and USB sockets to charge devices or other low amp accessories. The battery system is charged by the vehicles engine or 240V mains power. With larger capacity batteries and/or solar charging options available for off-grid stays and off-grid 240v power supply.

If its comfort, safety and a long list of standard inclusions that you want, the Toyota HiAce Frontline Campervan could be the one for you.

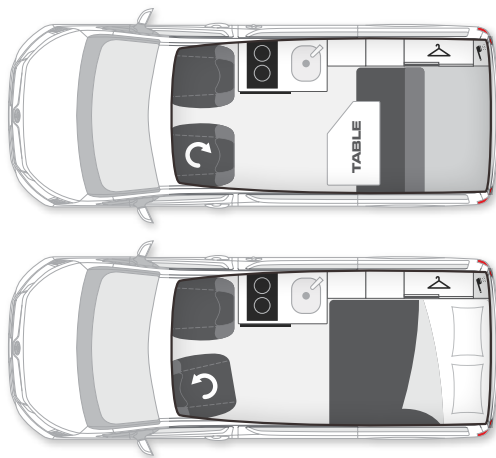

Frontline has manufactured over 4,000 quality campervans since 1987. We pride ourself on maintaining a very well respected name by constantly producing quality products with highly trained staff, quality fittings and excellent after sales service.

Choose from five flexible smart campervan layouts to suit your camping style

Adventurer
